MSR
TENTS

"Quality is our driving force."

Marilyn Moss, President, Moss Tents

Moss has always been singleminded—to produce tents of uncompromising quality, backed by service second to none. Our quality is a statement sculpted in fabric. Quality is a commitment to the finest fabrics, attention to the most minute detail, and meticulous inspection at every step of the production process. Indeed, we are so confident of our product that we offer the strongest guarantee of any tent manufacturer. Moss service is a commitment sacred to that guarantee. Service is a phone call away no matter where the outdoor beckons.

Moss is a family of dedicated individuals. These men and women lead the way with new ideas and unsurpassed service, while always striving for further innovation, durability and beauty. It's these people who design, sew, manage, inspect and service our tents that make the difference. It was Moss who originated and patented tensioned fabric design and revolutionized the concept of "tent". It was Moss who introduced the vestibule and a quick/attach fly system. Moss is the innovator so widely copied in the market place.

Moss never went overseas to reduce labor costs at the expense of quality. Each of our tents is a personal statement that this country still stands for Quality, Integrity, and Innovation.

Cover: Pemaquid Point, Maine by Dick Durance II

Since our designers are critical users and because new ideas are encouraged, major innovations are created at Moss. Many mechanical and design patents have been awarded to Moss Tents as a result of this pioneering spirit and commitment to performance and quality. Our high standards have helped to raise the level of quality at our suppliers. We hope our commitment to use all American-made materials will continue to foster high quality at all levels.

Many of our highly skilled stitchers have been with us from the beginning. They all possess a natural skill and an eye for quality that only improves with time. This long term commitment fosters a real pride in the product. Each person takes special care in the construction of each tent.

Tent inspection is a demanding job. It begins with our specially built fabric inspection machine that helps us identify any flaws in weave or coating before we begin tent construction. It also involves completely assembling each finished tent on our inspection table and climbing up, around and in the tent to conscientiously inspect for zipper function, seam finishing and general tautness. Only this last effort can completely insure that every tent meets our high standards.

COMMENTS...

"The combination of room, weight and ease of setup make the Olympic tops in the field. I did a fair amount of comparative research before choosing the Olympic. Finally, I decided that the Olympic gave the most for the money. Every off-shore pack or tent I have purchased has been poorly cut and sewn. ...buying quality in the first place always saves me money."
Vernone Sparkes, New York

"We had two Encores and two StarDome III tents in continuous use on our successful K2 expedition to China. We were highly impressed with their performance. High velocity winds, heavy snowfall, and the constant barrage of UV sunlight by day and sub-zero cold at night assailed the tents for 60 days. Every time the tents stood firm, exactly as we had pitched them. While the Encore, with its spaciousness and standing room height flexed resiliently to the gusts that drop from K2's North Ridge, the low profile of the Stardome III deflected wind and snow-loading like an armored tank-turret. During the heat of the day, when the oven-like air of the nearby Takla Makan desert wafted into the valley, the vented side and ceiling panels on these tents let in breezes from any angle. These beautifully engineered tents survived the abuse of this long expedition practically unscathed, and are ready for another Himalayan season."
Greg Child, K2 North Ridge Exp.

"For my thru-hike of the Appalachian Trail, I wanted a small, light tent that could take severe conditions if it had to. My Outland tent was used continuously. It was definitely one of my best pieces of equipment."
Greg Muennich, Connecticut

"We spent a total of 21 days "holed up" in our StarDome II tents because of wind and/or rain storms. Those tents were fabulous! During one storm we had drenching rain for more than one hundred hours and another storm with continuous wind with speeds ranging from 45 MPH to 60 MPH for more than 110 hours. In other words we got "hammered" to a pulp...but good! The tents performed flawlessly! Thank God for Moss Tents! You just can't believe how secure those tents are...Thank you."
James R. Abel, Arctic Barrens Exp.

"Ours was the first success by the south face of Nanga Parbat in the Western Himalayas for over six years! During the forty-five days and nights, our Olympic tent was shuffled between camps and used by the entire expedition. It saw us through the worst that the mountain threw at us. Every member of the expedition appreciated the superb comfort, space efficient design and faultless craftsmanship of the Moss Olympic."
Steve House, Slovene Mountaineering Expedition, Nanga Parbat

New Designs

"The Tent-Wing proved itself during a 4 day stretch of rain. We were able to get out of the tent to avoid claustrophobia and also cook without getting soaked or inhaling fumes. We love the versatility of being able to use the Moss Tent-Wing by itself."

Jeffrey and Pat Whitaker, Colorado

The Tent-Wing The Tent-Wing literally adds a canopy to your tent. An exciting, new innovation from Moss, the Tent-Wing attaches securely by conforming to the curve of the tent's hooped vestibule.

Although designed primarily for use on Moss tents with hooped vestibules, this year all Moss Tents (except the Encore) include features that allow the Tent-Wing to be attached over the tent doors, even those without vestibules. It will also fit on most hooped vestibules of other manufacturers' models.

The Tent-Wing pitches into a variety of configurations to suit changing weather conditions. The compound curves spill wind and rain while remaining taut and quiet.

This versatile, lightweight 1 1/2 lb. structure includes a 4' 10" pole, rolls to a compact 1'7"x 4" size and is made of strong, coated ripstop nylon.

Now, you can add enjoyment to your camping by providing excellent protection around the entrance and gaining covered open air space for relaxing, gear storage and view enjoyment. Your trips will have more comfort, protection and less confinement, especially during inclement weather.

The Tent-Wing canopy provides 35 sq.ft. of overhead shelter from sun or rain. An optional three-section pole may be used to erect the Tent-Wing separately.

Tent-Wing canopy designed by Charles Duvall, Moss Inc.

The Deltoid & Netting Deltoid

The new Deltoids are the smallest and lightest of the award winning tent series that began with the geometrical floor plans of our Big and Little Dipper tents. The two new Deltoids feature identical triangular floor plans which, combined with an easy three pole set up, produce a versatile, freestanding design, with a popular skylight top window and a convenient vestibule area.

All the poles are equal lengths, eliminating the guesswork involved in which pole goes where. The spacious and versatile floor plan allows you to choose different sleeping configurations to suit different sleeping styles. Two adults will be comfortable with plenty of space left over for gear or the possibility of sleeping another companion. This tent is also just the right size for two adults plus a child, making it a good choice for small families.

Lighter in weight at only 7 lbs., the Netting Deltoid offers screened walls for lots of views and breezes for the three season camper. Both models feature plenty of shelter and ventilation with one door, two windows, a skylight top and a full coverage vestibule/fly.

The full coverage rainfly for both Deltoids provides a separate vestibule area for convenient entrance protection and access to gear.

"The Olympic worked splendidly. We experienced ground blizzards, during our first two nights on Mt. Fairweather... We realized we had nothing to worry about, for the tent would obviously ride out anything shy of an avalanche. It is a clever, functional and sturdy expedition tent, suited for a wide variety of terrain. I think the Olympic is one of the most versatile tent designs I have ever used or seen."

Jonathan Waterman, author of *Surviving Denali*

The Olympic A versatile, four season tent—the Olympic is generously sized, freestanding and stable. It is designed to provide conveniences and comfort for 2-3, while standing firm against wind and snow. The central arch, in conjunction with the two end arches, creates two tripods which provide extraordinary strength and stability. Nearly vertical sidewalls translate into increased interior space, enabling all the floor area to be used.

Ample ventilation flows through the screened front and rear doors for comfort in bad weather and all seasons. These doors allow you a choice of entrances and exits in a storm. The rainfly provides two doors and a separate aluminum pole which forms a curve over the front door of the tent to create a large 13 sq. ft. sheltered vestibule area.

This tent is a thoughtfully conceived, extremely comfortable and rugged all-season shelter.

The Olympic's full coverage rainfly features two entrances and a large hooped vestibule.

The Netting Outland & Outland

The Outland tents offer the same performance features as our popular Olympic, but in lighter weight and more compact packages.

Both Outlands offer generous sleeping space and full sit up room for one person. The framework configuration creates two tripods which provide extraordinary stability and strength. Nearly vertical sidewalls shed weather easily and allow for full utilization of all floor area. This exceptionally dependable tent design has the wanted features, such as—freestanding ease and a convenient sheltered vestibule area for storage.

The four season Outland features front and rear doors, which provide a choice of entrances during inclement weather and easier exits with a minimum of climbing over gear. For those situations where weight is critical and maximum ventilation is desirable, the new Netting Outland will provide all the above benefits (with one door).

Either Outland will provide secure, versatile shelter for solo adventurers or for group travelers who want their own tenting space.

The full coverage rainfly for both Outlands incorporates a 6 1/2 sq. ft. vestibule and storage area.

Little & Big Dippers

"It rained day and night for the first two weeks of our twelve week bicycle tour. If we had not had our Moss tent, I probably would not have finished. The Big Dipper *(opposite page)* was large enough for my 6' 3" husband to stretch out comfortably, yet simple enough for a camping novice like myself to assemble alone, even in the dark. While campers around us suffered broken zippers, stakes and even poles, our durable Moss tent remained trouble-free. Moss is the best."

David and Lindsey Moss *(no relation)*, Texas

The Little Dipper We proudly offer the new Little Dipper as a versatile addition to the Moss line of high performance tents. Inspired by the graceful and functional symmetry of our popular Big Dipper tent, the Little Dipper also offers all season protection with the convenience of two doors and a large hooped vestibule. Ample ventilation and views are also provided by a large window plus a zippered screened skylight.

Scaled down to comfortably sleep 3 people, this design features a square floor plan with a maximum of usable floor space. Four identical poles combine with a freestanding design to produce an easily set up and very stable shelter. The triangulated top and side panels create a geometry of high strength to shrug off snow and wind. Optimum weather protection is provided by the full coverage rainfly. A separate arch, incorporated into the rainfly, forms a sheltered area over one door. This vestibule provides an additional 14 sq. ft. of storage area.

The Little Dipper's many features pack into a very compact 1'9" x 7" package.

The Big Dipper Our lightest 4 person tent, the Big Dipper offers secure all season protection plus many features for weight conscious groups .

The simplicity and symmetry of the new Big Dipper offer advantages in both function and form. Five identical poles combine with a pentagonal floor plan to produce a spacious, easily set up, freestanding tent. The two doors, two large floor-to-ceiling windows, plus the zippered screened skylight open and close to offer views and easily adjustable ventilation.

The triangulated top and side panels create a geometry of high strength to shed snow and wind. We use a larger diameter .355 Easton Aluminum frame, covered by our Lifetime Pole Guarantee, for maximum strength. The full coverage rainfly/vestibule provides optimum weather protection. The Big Dipper is a high performance shelter, with a unique combination of conveniences, for a group of up to 4 people.

The Little Dipper and Big Dipper's full coverage rainfly creates a 14 sq. ft. hooped vestibule area for convenient storage space.

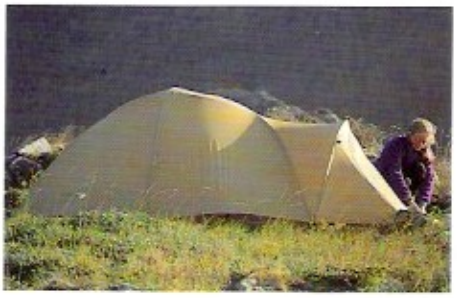
StarDomes II & III

The Star System Series

When we introduced and patented the vesica piscus, intersecting arch design, we immediately knew we had a winner. The classic, yet innovative skylight, formed at the top by the two intersecting poles, created starlight views and excellent ventilation. This, plus the combination of strength, freestanding stability, ease of set up, and increased interior space, created an outstanding tent. We went on to design a tent with the same features, for almost every application. One of our Star System Series tents stands ready to maximize your enjoyment of the outdoors.

The screened skylight is a feature common to all Star System designs.

StarDome II



The StarDome II's full coverage rainfly creates a useful hooped vestibule with 9 sq. ft. of storage area.

The StarDomes II & III These incredibly secure tents are engineered to withstand almost anything nature (or you) can deliver. An additional third pole arches through the ceiling, providing tremendous strength and interior space. Offering the very attractive Star System combination of features in the four season category, these tents are also extremely versatile. The Star System trademark screened ceiling, an unusual feature for a four season tent, provides

STAR SYSTEM SERIES

"It is no accident that Moss Tents are being used for our expedition! Many of the team members have grown to appreciate the ease of setup, the structural integrity, the roomy feeling, and especially the lightweight of your products. ...In fact the StarDome is a veteran of a Himalayan and two Alaskan adventures! ...Compactness, lightness and ease of assembly of the StarDome (not to mention the fact that it is "bombproof") make it the tent of choice high on the mountain."

Alfred J. Torrisi, Winter Pumori Expedition, 1990

StarDome III

welcome ventilation, plus a view of the stars, then zips closed when conditions warrant.

Both front and rear doors offer much appreciated convenience as well as increased ventilation possibilities. Each full coverage rainfly features an arch curving over one door, creating a hooped vestibule entrance and storage area. The StarDome II's vestibule offers 9 sq. feet of storage area while the StarDome III's rainfly creates a larger 13 sq. ft. vestibule area. The StarDome III also utilizes a larger diameter framework more suited to the larger size of the tent.

The StarDomes provide you with spacious, comfortable and dependable state-of-the-art shelter in a wide variety of conditions.

The StarDome III's full coverage rainfly with hooped vestibule creates an additional 13 sq. ft. of storage area.

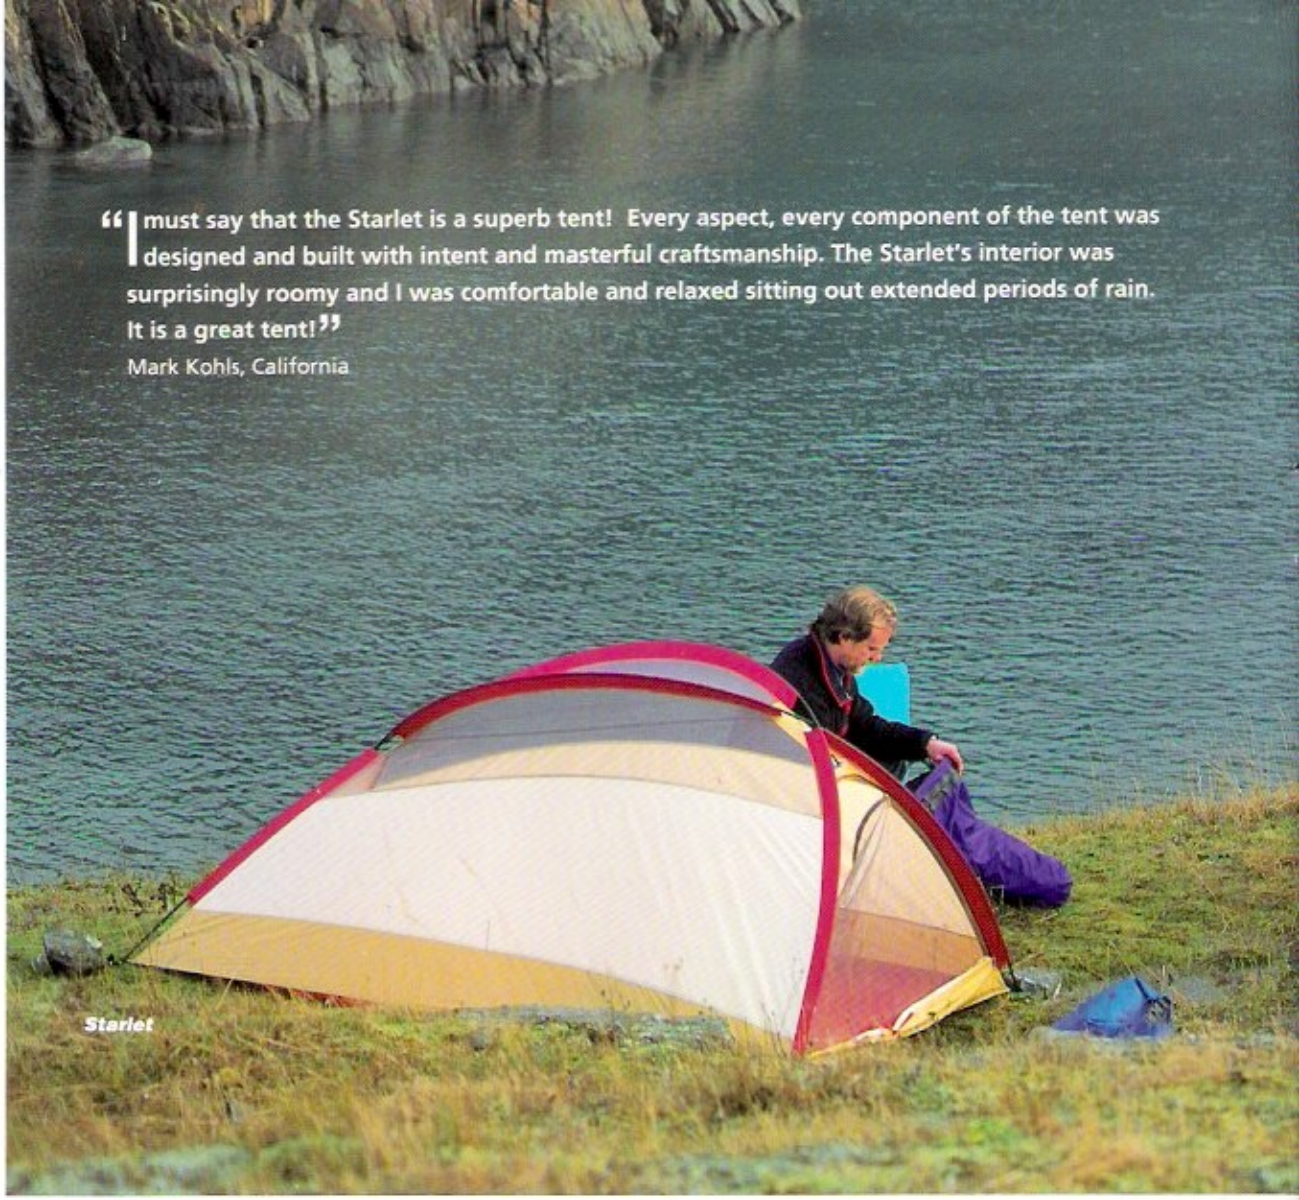
Starlet & StarTrak

"I must say that the Starlet is a superb tent! Every aspect, every component of the tent was designed and built with intent and masterful craftsmanship. The Starlet's interior was surprisingly roomy and I was comfortable and relaxed sitting out extended periods of rain. It is a great tent!"
Mark Kohls, California



The Starlet The three season Starlet offers all the benefits of the "Star System" series in the smallest, lightest weight package. Only 4 pounds, 14 ounces, the 29 square feet of the Starlet provide ample room to sit up and stretch for 1 person while packing into a tiny 16 inch by 5 inch bag. This versatile tent is light enough to go solo but also has enough room to sleep 2 people. Your gear can go into the additional 8.5 sq. ft. vestibule entrance area created by the full coverage rainfly. This tent also enjoys excellent ventilation and views provided through the screened ceiling that extends partially down the side walls. Easy set up is facilitated by the freestanding design and the use of two identical poles.

Of course, it also has the strength, freestanding stability, steeply curved sidewalls and screened skylight window that are integral features of all the graceful and functional intersecting-arch "Star System" designs.

The StarTrak The StarTrak is a lightweight three season version of our popular "Star System" design series. A deluxe translation of the popular Starlet, the StarTrak has more space and features for those who want added comfort. This three season tent packs into a tiny 16 inch by 6 inch bag, yet offers a total interior space of 35 sq. ft., a larger vestibule, and the option of zipping closed the screened skylight window.

The steeply curved side walls create lots of useable sitting space. The full coverage rainfly creates a hooped vestibule/entrance area with an additional 14 sq. ft. for storage of your equipment.

The StarTrak also benefits from the strength, freestanding stability, steeply curved sidewalls and screened skylight window that are inherent features of the "Star System Series".

The StarTrak's full coverage rainfly creates a hooped vestibule with side opening door.

"We are Moss supporters "to the end". We used our Encore tent *(opposite page)* every night on our 5,500 mile trip to seven National Parks, then for thirty more nights along the Pacific Coast. The Encore under a starlit night is impossible to beat. Rain, snow, sand and wind are no problem for our Moss Encore. We thank you and look forward to our next trip."

Doug Vaughn, California

The StarGazer This tent offers three season camping with optimum interior space, plus all the "Star System" design features. Over 41 sq. ft. of floor area, a luxurious 4' 6" of headroom and nearly vertical side walls all combine to supply room where you need it. This is truly usable interior space—enough for both of you to sit and stretch. An additional 10.9 sq. ft of vestibule area is created by the rainfly.

The screened skylight feature provides sky views and, along with the large rear window, ample ventilation. Freestanding, this tent is stable and easy to set up on any terrain. The StarGazer will provide you and a friend with the maximum in space, ventilation and views.

The Encore If you are looking for a three season shelter with optimum space, ease and views, the Encore will provide these, and more. Our largest Star System design, the Encore stands up to all tents in it's class with more headroom and features. A full size, stand-up tent in a small (9 x 24 in.) and lightweight package, its freestanding feature enhances stability and makes it easy to set up on sand, rock, or rough terrain.

The popular screened skylight provides a spectacular sky panorama. The side arches create a larger interior space and offer two side windows for more views while lying down. Along with the sky light, the large rear and side windows supply ventilation from any angle to capture any breeze, even in inclement weather.

Whether your needs are for a family tent, a group shelter or base camp, this tent will perform—without compromise.

The Encore's full coverage rainfly protects the side windows, allowing for increased ventilation during rain.

Moss Quality Construction

Framework & Stakes

Lightweight Tent Framework - 7075W-T9 Easton Aluminum alloy extruded tubing, pre-bent where necessary, straight otherwise. This extremely hard material has a tensile strength of 96,000 psi. These small diameter poles (outside diameter .340", except Big Dipper which is .355" diameter.), with a wall thickness of .025", are manufactured for precision and the proper flexible strength. The high resistance to cracking and bending, plus the anodized finish, provides optimum performance. All sections are joined with shock cord for quick assembly.

StarDome III & Encore Framework - 7075W-T9 Easton anodized aluminum alloy tubing. This specially drawn, .490" diameter, high strength tubing, has a wall thickness of .026" and a tensile strength of 96,000 psi.

Fabrics

Colors - Our gentle cream and light tan colors are carefully chosen for their pleasant effect during long confinement under adverse conditions. Pole tunnels and floors are red.

Safety - All Moss tents are made with CPAI-84 flame resistant fabric.

No-See-Um-Netting - In all tents. Extremely fine and stable, 1.0 oz. nylon monofilament knit mesh keeps even no-see-ums out, but lets the breezes in.

Coated Ripstop Nylon - In flysheet and parts of body to ensure complete waterproof coverage. 1.9 oz. ripstop weave nylon is coated with a light urethane polymer coat for a total weight of 2.4-2.5 oz. 70 denier nylon with thread count of 101 x 98. Waterproof, extremely high tensile strength and 9 lbs. tear resistance in both the warp and the filling.

Coated Nylon Taffeta - In floors and pole tunnels of lightweight tents, a strong, lightweight 70 denier, 2.2 oz. nylon with thread count of 98 x 90, is coated with a super urethane polymer to ensure waterproofness, for a total weight of 3.2 oz./sq. yd..

Noncoated Breathable Ripstop Nylon - In ceilings of tents where protected by fly. 70 denier nylon with a thread count of 101 x 98 with high tensile strength and 9 lbs. tear resistance in both the warp and filling.

Coated Nylon Oxford - In the floors and tunnels of the Encore. Heavy duty 3.8 oz./sq. yd. with 21 x 22 lbs. tear strength in warp and filling, respectively. Coated with urethane polymer for waterproofness.

Quality is Our Driving Force. We Double Guarantee it.

1. Moss Workmanship Guarantee

We at Moss Tents fully guarantee all tents to the original owner against defects in workmanship. If our tents have received proper care, but fail due to a defect in manufacturing, the tent will be repaired or replaced at our discretion.

(Repairs to tents due to accident, improper care or negligence, where we are not at fault — including sun degradation and wear and tear due to hard use — will be performed for a reasonable charge.)

2. Moss Lifetime Pole Guarantee

Moss offers a lifetime guarantee, to the original owner (since Jan. 1, 1985), on all Moss tent framework. No matter how a tent pole is broken, we will repair or replace it FREE for the lifetime of the tent, upon postage paid delivery to the Moss factory.

Construction

Sewing Features - Seams are sewn with lock stitch to ensure adequate burst strength and minimize "seam slippage". All structural seams are at least double sewn and clean finished. Bar tacks used extensively for reinforcement.

Lap-Felled Seam - All tents. Extremely strong and water resistant. Joined and folded so a double row of stitching passes through four layers of material.

Standard Reinforcement - Double layer reinforcement is sewn onto stress points on all tents to ensure strength and durability.

Bound Seams - All tents. Binding of waterproof nylon taffeta cut on straight grain and sewn on all edges makes them clean and strong, keeps seams from stretching.

Webbing - All tents. Used for strength and reinforcement in high stress areas. Also for stake loops, grommet tabs, fly pull outs.

Tent Corners - Grommet tabs with secure non-rusting brass spur grommets. Multiple grommets allow for tension adjustment on tents. The stake loop is securely fastened with bar tacks.

Polyester Core/Cotton Wrap Thread - Heavy duty, resists shrinking, stretching, cutting fabric and rotting. Expands when wet to fill needle holes.

YKK Zippers - All tents use these rugged self repairing polyester coil zippers. Proven very strong, slides smoothly and works easily around curves.

Pole Sleeves - Bound into tents, poles slip through and tense the skin from the outside, distributing the load throughout the curve, minimizing stress points.

Conveniences

Side Release Buckles - All tents. This fly attachment system makes the fly easier to snap on and off and allows for quick, easy adjustability.

Stake, Pole and Tent Bags - All tents come packed in sturdy, coated nylon drawstring storage bags custom sized to the tent. Also, stakes and poles each have their own storage bags. This allows you to keep wet, dirty stakes separate from the rest of the tent and keep poles clean and handy for next set-up. The separate bags also allow you to divide the weight.

Cord Locks - Push button, spring action automatic cord locks eliminate knot tying. On all tent, pole and stake bags.

Line Slips - Light and strong aluminum line tighteners tighten lines fast and will not slip.

Flashlight Loops and Pockets - Convenient loops hang from the ceiling and allow you to hang flashlights and rig lines for wet clothing. Store small items safely within easy reach in netting storage pockets on interior sidewalls.

"The Moss Parawings not only kept us and our dinner dry during the evening rains, but also enhanced our camaraderie."

Donnie Dove, Project RAFT (Russians and Americans For Teamwork)

The 12' & 19' Parawings

Moss Parawings provide you with more shelter and strength, with less weight, than any conventional tarp. This unique design is an innovative and patented improvement on the conventional square tarp/dining fly. The Parawing's hyperbolic paraboloid compound curves offer more protection and strength by facilitating the spilling of wind and rain. This concept utilizes exclusive tension fabric design to keep the entire surface of the structure taut. When the surface is taut, it is better able to efficiently distribute stress.

The use of a good dining fly can make the difference between an enjoyable vacation and one that is wet and miserable. The 12 ft. model can provide weight conscious campers with ample cooking and dining shelter. The 19 ft. model, which comes with two 8 ft. steel poles (1 inch diameter), is especially suited to family camping as a dining fly, or for added flair and protection at picnics, barbecues or parties at home or on the beach.

The 12' Parawing offers lightweight shelter for cooking, dining and camping.

12' & 19' Parawings
